blueplanet 50.0 TL3**

Application instructions

for installers

(Note Software-Version: Page 4)

1 Application

We have provided you with an intuitive web-based user interface for remote configuration of a KACO inverter which is connected to a network.

Figure 1. Web-based user interface - data view

Enter the unit's IP address (e.g. http://192.168.100.13) into the address bar of a common internet browser to gain access to the user interface. You will find the inverter IP address in the menu "Setting" >> "Network" >> "Connection status" via Show button.

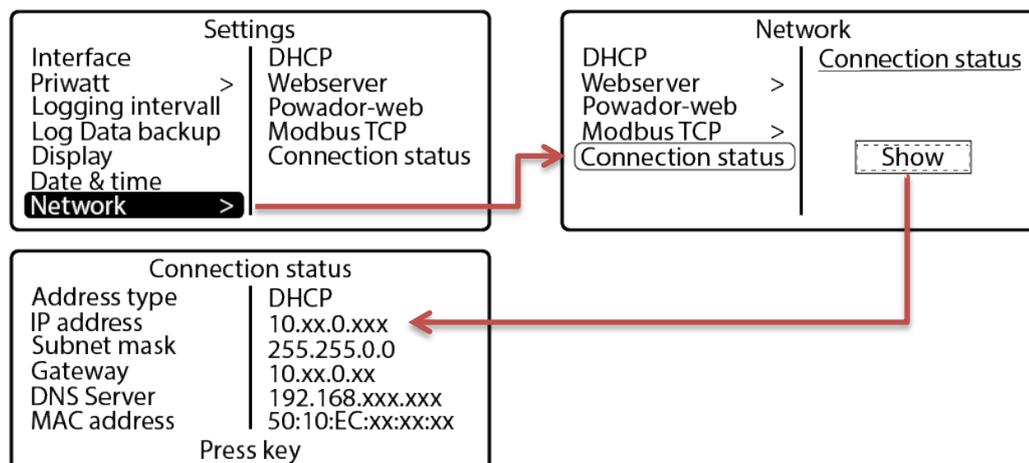

Figure 2. Access to remote config via the webserver menu interface on the inverter

It is only possible to configure the inverter remotely if this function has been activated locally via the inverter's webserver menu on the unit.

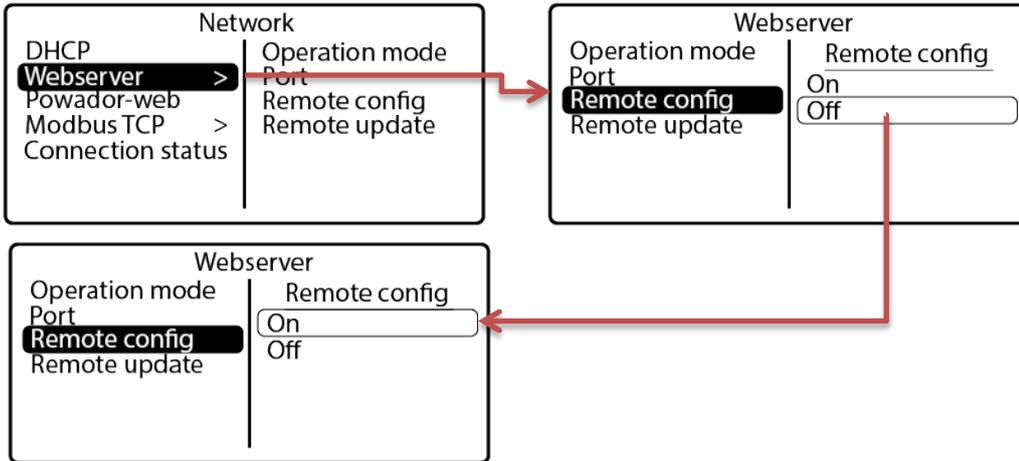

Figure 3. Access to remote config via the webservice menu interface on the inverter

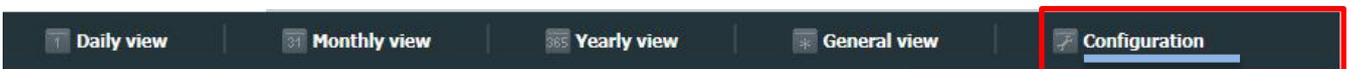

Figure 4. Selection bar with remote config activated

Following activation, the link "Configuration" is available in the selection bar on the web user interface.

If you are planning to update the unit remotely, this function must also be activated in the inverter's webservice menu. This is only possible if the function has been activated locally via the inverter's webservice menu on the unit.

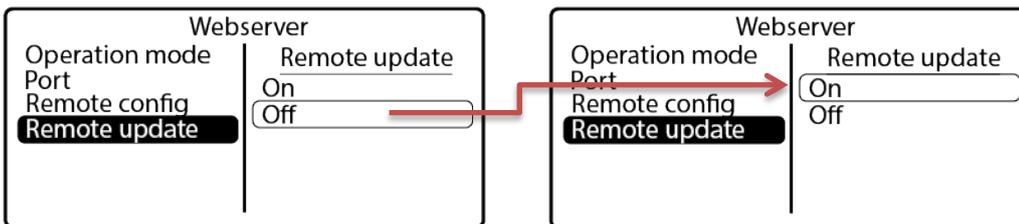

Figure 5. Remote update activation via the webservice menu interface on the inverter

2 Safety

CAUTION
<p>Unauthorised access can lead to damage</p> <p>If unauthorised persons gain access to the system, unit settings could be manipulated which could seriously impair the functionality and safety of the unit and lead to damage.</p> <p>> The following functions must only be used on the local network or via a secure VPN connection.</p>

	<p>NOTE</p> <p>The update can take several minutes. The "Operating" LED flashes during the update process. The inverter may restart several times.</p> <p>The following message appears if the DC power supply is too low: "DC power supply too low! Perform update anyway?".</p> <p>In this case, select "No" and perform the update with a stable voltage supply.</p> <p>The unit-specific and serial number dependent password is required to set "critical" parameters. The unit-specific password can be obtained from KACO customer service, if necessary.</p> <p>Login data must be stored in a location which is not accessible to third parties.</p>

Notification window prior to changing “critical” parameters	Operation and control
 <p>Figure 6. Enter unit-specific password</p>	<ul style="list-style-type: none"> ✓ Enter unit-specific password into <i>framed free-text section</i>. ✓ Acknowledge entry by clicking the “Confirm” button.

	<p>ACCESS DATA ^{*)}</p> <p>The two accounts “user” (restricted configuration options) and “installer” (advanced configuration options) are available for remote access to the unit:</p> <p>User name: <code>installer</code></p> <p>Password: <code>Mo_g010rP!</code> (initial setting)</p> <p>^{*)} Important: Following initial start-up, you must change the access data via one of the menu items “Change user password” or “Change installer password” in the <i>Main menu</i> under <i>Functions</i>.</p>
	<p>NOTE</p> <p>The functions described in the following chapter are only available on the inverters listed and with the existing software package (see chapter 5.1).</p> <p>Configurations and software updates may only be carried out if there is a suitable DC power supply.</p>
	<p>DEVICE-SPECIFIC NOTE</p> <p>Modified parameters in the device series blueplanet 15.0-20.0TL3 from Software Version V4.x are only adopted when the device is restarted, but at the latest on the next day.</p>
	<p>SOFTWARE VERSION</p> <p>Description is created for the devices with SW version \geq V4.xx</p> <p>For devices with SW version \leq V3.58: existing deactivated vector shift behavior compliant the ALoMCP.</p>

3 Navigation

The following table will support you during the remote config process using the web user interface and shows you the input screens behind the “Configuration” link.

Input screens that are marked on the side(user) are only available to installers, service partners and technicians and can not be accessed by system operators.

Note: In the case of inactive entry or use, the interface is made available for 10 minutes for configuration purposes. Once this time has elapsed, you must log in again.

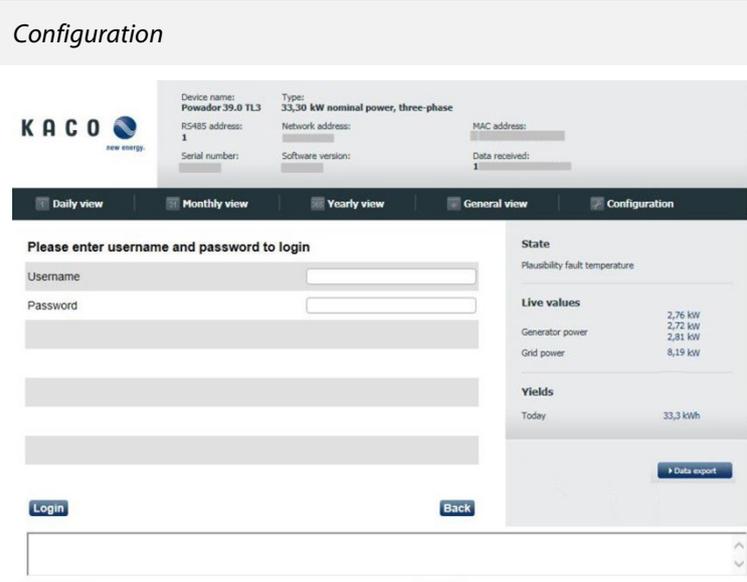

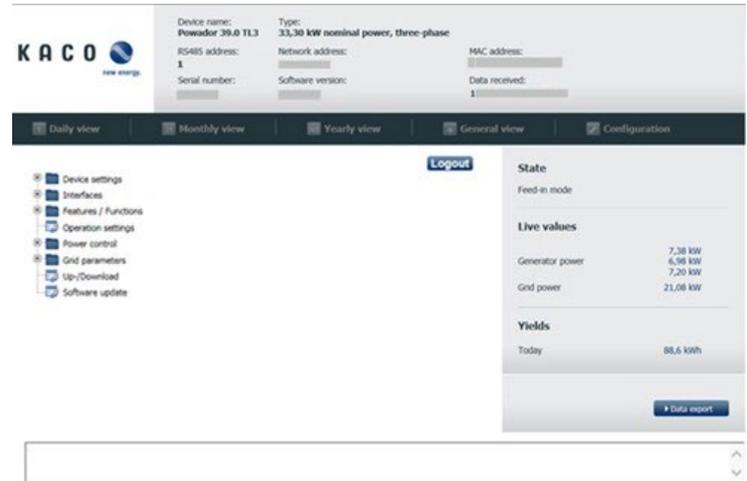

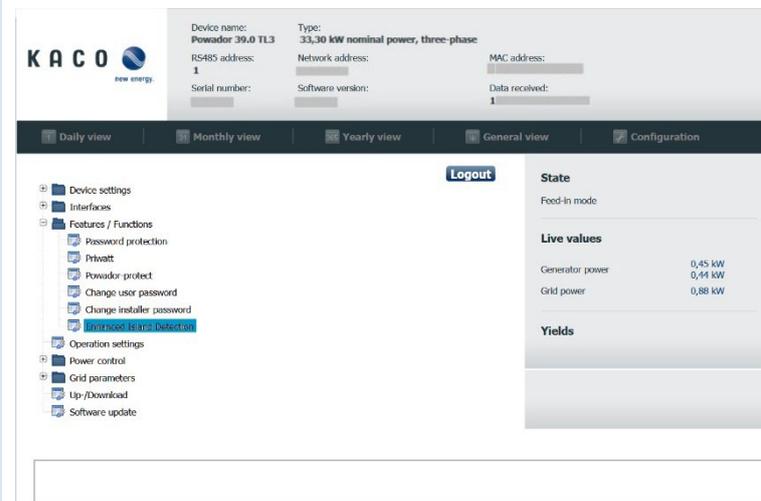

User	Inverter input screen	Operation and navigation
	 <p>The screenshot shows the 'Configuration' login screen. At the top, it displays the KACO logo and device information: Device name: Powador 39.0 TL3, Type: 33,30 kW nominal power, three-phase, RS485 address: 1, Network address: [redacted], MAC address: [redacted], Serial number: [redacted], Software version: [redacted], Data received: 1. Below this is a navigation bar with tabs for Daily view, Monthly view, Yearly view, General view, and Configuration. The main area is titled 'Please enter username and password to login' and contains fields for Username and Password, a Login button, and a Back button. On the right side, there are sections for State (Plausibility fault temperature), Live values (Generator power: 2,76 kW, 2,72 kW, 2,81 kW; Grid power: 8,19 kW), and Yields (Today: 33,3 kWh). A Data export button is located at the bottom right.</p>	<ul style="list-style-type: none"> ✓ Access data: Enter user name and password into the <i>framed free-text sections</i>. ✓ Confirm the entry with the “Login” button. ✓ Clicking the “Back” button will take you back to the previous input screen at any time. <p>Note: If you move your <i>cursor</i> over a button, further information regarding entry or relevant warning messages will be displayed.</p> 
	 <p>The screenshot shows the 'Inverter settings tree structure'. It features a sidebar menu on the left with categories: Device settings, Interfaces, Features / Functions, Operation settings, Power control, Grid parameters, Up/Download, and Software update. A Logout button is positioned above the menu. The main area displays the same device information as Figure 7. The navigation bar is identical. The State section shows 'Feed-in mode'. Live values are: Generator power (7,38 kW, 6,98 kW, 7,20 kW) and Grid power (21,08 kW). Yields for Today are 88,6 kWh. A Data export button is at the bottom right.</p>	<p>Note: A specific parameter or function tree structure for the inverter is adopted according to your login details.</p> <ul style="list-style-type: none"> ✓ By clicking the “+” box, the folder opens up to display other submenu items. ✓ Clicking the “Logout” button will cancel the current operation and you will be taken back to the data view.

Operation and navigation

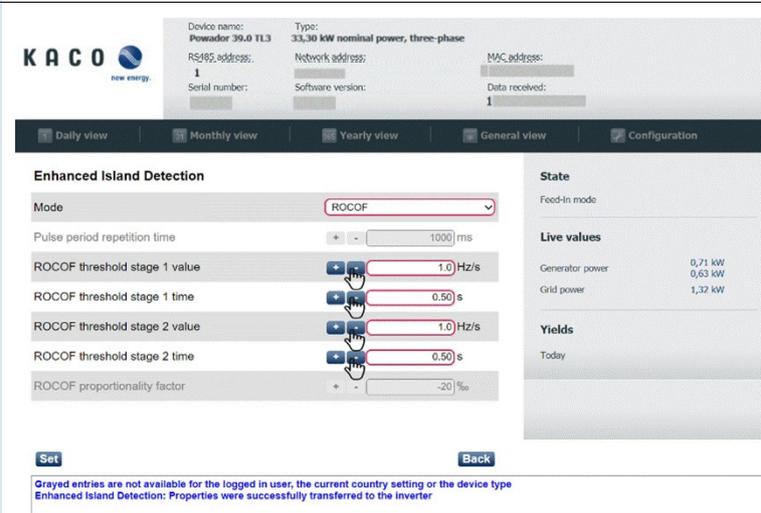

Required Enhanced Island Function Settings in Great Britain.

- ✓ Open the folder “Features / Functions” and selected the menu item “Enhanced Island Detection”.
- ✓ Select one of the next described Option.

Note: Do not use “Enhanced Rocof” or “Frequency shift”.

Figure 9. Menu item Features / Functions

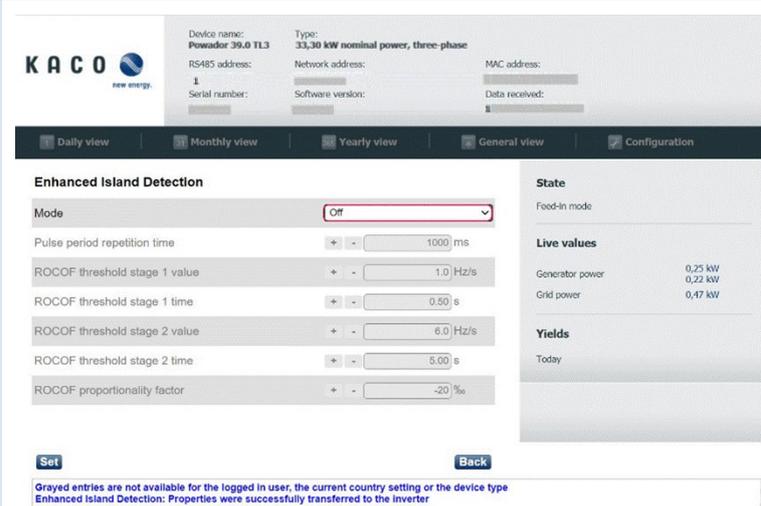

Option 1 – ROCOF - Preferred

Note: Adjust following paraments to compliance ROCOF function.

- ✓ Set active box threshold stage 1 value or configure it using the “+/-” buttons to **1.0 Hz/s**.
- ✓ Set active box threshold stage 1 time or configure it using the “+/-” buttons to **0,5 s**.
- ✓ Set active box threshold stage 2 value or configure it using the “+/-” buttons to **1.0 Hz/s**.
- ✓ Set active box threshold stage 2 time or configure it using the “+/-” buttons to **0,5 s**.
- ✓ Set the selection by clicking the “Set” button.

Note: Observe the further information in the comments box below.

Figure 10. Enhanced Island Detection – Setting ROCOF

Option 2 - Off

Note: Grid operators require shutdown of the device with standalone grid detection.

- ✓ Deactivate the enhanced island detection mode via the dropdown menu “v” field to **Off** if possible, at your location.
- ✓ Set the selection by clicking the “Set” button.

Note: Observe the further information in the comments box below.

Figure 11. Enhanced Island Detection – Setting Off

4 More information

NOTE

Information concerning the specific functionality of menu entries can be found in the operation manuals on our homepage.
